liftaris.dev

Seattle, WA

Self-driven full-stack engineer with a front-end lean. Scrappy enough to work quickly in small teams. Excited about product engineering, developer tooling, and AI.

Moderna	Software Engineer II	Seattle, WA	06/2023 - Present
- Designed and built mTranslate from zero to a company-wide AI translation platform core to Moderna's translation needs, enabling \$1M in translation savings in its first launch year. - Technical lead for a team of 4 engineers; delivered a full-stack healthcare compliance platform spanning authentication, audit capabilities, and intricate, compliant business logic critical to Moderna's legal team operations. - Developed Moderna's shared React component library across multiple releases, creating reusable interfaces, responsive layouts, and brand themes for applications across products and markets. - Built shared release controls and developer tooling for Moderna's microfrontend platform.			
Liftaris	Consultant	Remote	12/2022 - 06/2023
- Ran an independent software consultancy delivering full-stack tooling and websites in React and Next.js. - Built Rococo under the mentorship of Alex Graveley, creator of GitHub Copilot and Perplexity Computer-a marketplace enabling artists to earn money from licensed use of their unique style in AI-generated imagery. - Contributed to Thoth.ai's Next.js interface for turning voice, video, and text into one-page AI-generated infographics.			
Health Note	Software Engineer	Remote	03/2022 - 12/2022
- Owned a drag-and-drop form builder that let clinics convert existing PDF intake, consent, signature, allergy, and appointment forms into digital workflows by mapping interactive fields onto each document, reducing paper-based and manual work. - Designed and implemented dedicated customer dashboards for small clinics and physicians, moving with speed in a small startup with 14 employees.			
Parsons	Frontend Software Engineer	Remote	04/2021 - 03/2022
- Built intricate React and D3 dashboards for governmental agencies, visualizing inventory, equipment status, and budgeting tools. - Translated Figma mocks into high-fidelity, responsive, and data-dense interfaces for complex operational dashboards.			

PROJECTS

Herm TUI - github.com/liftaris/herm	2026
- Built a custom terminal interface for Hermes Agent with OpenTUI (React bindings), gaining traction online and recognition from the maintainers; features a rich chat interface and configuration tabs to customize agents directly within the terminal. - Open-source repository with ~300 stars on GitHub.	
BazaarGhost - bazaarghost.stream	11/2024 - Present
- Averages 5K monthly visitors; enables players of The Bazaar to search Twitch streams for match encounters against streamers and review how they squared up. - Computer-vision and OCR pipeline written in Python, with a PostgreSQL database on Supabase and a frontend built with Next.js and React. - Announcement post on Reddit amassed over 10 thousand impressions, 1.4K upvotes, and over 200 comments.	

EDUCATION

B.S. Computer Science	University of California, Santa Cruz 2015 - 2019
Association for Computing Machinery (ACM) Student Chapter Vice President
